ROHITH REDDY KOMATIREDDY

+91 7995371586 rohithkomatireddy051@gmail.com rohith-komatireddy

Software Developer

Software Developer with hands-on experience building production-ready web applications, specializing in React-based SPAs, REST API integration using Node.js and Python, and secure, scalable backend systems, including ticketing platforms and workflow-driven applications.

Experience

SDE | Grassroots July 2025 – Present

- Developed and maintained **React-based** single-page applications using functional components and Hooks for complex user workflows.
- Handled shared and component-level state using a lightweight state management approach, ensuring consistent data flow across screens.
- Built responsive and reusable UI components using **CSS**, **Flexbox**, and **Grid**, ensuring compatibility across devices and browsers.
- Integrated frontend features with **REST APIs** built using **Node.js** and **PHP,** working closely with MongoDB and MySQL-backed systems.
- Improved application stability and security by refining authentication flows with **OAuth2** and **JWT**, while collaborating via **Git** in sprint-based development.

SDE | GoCodeDesigners December 2024 – May 2025

- Developed and optimized **REST APIs** using **Node.js**, improving response times by 20% through efficient database queries.
- Worked with **MongoDB** and **MySQL** to ensure reliable API behavior for React-based frontend screens.
- Contributed to **CI/CD** workflows using Git-based version control for consistent deployments.
- Created documentation and test cases to support system stability and frontend-backend integration.

Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design (Flexbox, Grid),Zustand
Backend: Node.js, Express.js, PHP, Python (Automation, IMAP), REST APIs, OAuth2, JWT
Databases & Caching: MongoDB, MySQL, MySQL Workbench, Redis
Tools: Git, GitHub, Vite / Webpack, GitHub Actions, Docker, Postman
Cloud: AWS (EC2, S3, IAM)

Projects

Ticketing Application | React, Node.js, MongoDB, Redis

- Developed a full-stack ticketing system using **React** with functional components and Hooks for ticket dashboards and workflows.
- Implemented state handling for ticket status, roles, and forms using zustand.
- Integrated **REST APIs** built with **Node.js** and **Express**, using **MongoDB** and **MySQL** for ticket and user data management.
- Implemented **OAuth2**-based authentication with **JWT** access and refresh tokens, managed via Redis for secure session handling.
- Built Python automation to fetch emails via **IMAP**, auto-create tickets, and support sentiment-based ticket classification.

Soul Sync | Dating Platform

- Built a responsive dating application using React, HTML, CSS, and JavaScript.
- Implemented real-time chat with Socket.IO, reducing latency by 80%.
- Designed reusable components and achieved 90% test coverage using Jest.

Education

CVR College of Engineering 2019 – 2023
B.Tech in Electrical Engineering (CGPA: 8.35) *Hyderabad, Telangana*
Narayana Junior College 2017 – 2019

- Integrated frontend features with **REST API**s built using **Node.js** and **PHP,** working closely with MongoDB and MySQL-backed systems.
- Improved application stability and security by refining authentication flows with **OAuth2** and **JWT**, while collaborating via **Git** in sprint-based development.

SDE | GoCodeDesigners December 2024 – May 2025

- Developed and optimized **REST API**s using **Node.js**, improving response times by 20% through efficient database queries.
- Worked with **MongoDB** and **MySQL** to ensure reliable API behavior for React-based frontend screens.
- Contributed to **CI/CD** workflows using Git-based version control for consistent deployments.
- Created documentation and test cases to support system stability and frontend-backend integration.

Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design (Flexbox, Grid),Zustand
Backend: Node.js, Express.js, PHP, Python (Automation, IMAP), REST APIs, OAuth2, JWT
Databases & Caching: MongoDB, MySQL, MySQL Workbench, Redis
Tools: Git, GitHub, Vite / Webpack, GitHub Actions, Docker, Postman
Cloud: AWS (EC2, S3, IAM)

Projects

Ticketing Application | React, Node.js, MongoDB, Redis

- Developed a full-stack ticketing system using **React** with functional components and Hooks for ticket dashboards and workflows.
- Implemented state handling for ticket status, roles, and forms using zustand.
- Integrated **REST APIs** built with **Node.js** and **Express**, using **MongoDB** and **MySQL** for ticket and user data management.
- Implemented **OAuth2**-based authentication with **JWT** access and refresh tokens, managed via Redis for secure session handling.
- Built Python automation to fetch emails via **IMAP**, auto-create tickets, and support sentiment-based ticket classification.

Soul Sync | Dating Platform

- Built a responsive dating application using React, HTML, CSS, and JavaScript.
- Implemented real-time chat with Socket.IO, reducing latency by 80%.
- Designed reusable components and achieved 90% test coverage using Jest.

Education

CVR College of Engineering 2019 – 2023
B.Tech in Electrical Engineering (CGPA: 8.35) *Hyderabad, Telangana*
Narayana Junior College 2017 – 2019

- Developed a full-stack ticketing system using **React** with functional components and Hooks for ticket dashboards and workflows.
- Implemented state handling for ticket status, roles, and forms using zustand.
- Integrated **REST APIs** built with **Node.js** and **Express**, using **MongoDB** and **MySQL** for ticket and user data management.
- Implemented **OAuth2**-based authentication with **JWT** access and refresh tokens, managed via Redis for secure session handling.
- Built Python automation to fetch emails via **IMAP**, auto-create tickets, and support sentiment-based ticket classification.

Soul Sync | Dating Platform

- Built a responsive dating application using React, HTML, CSS, and JavaScript.
- Implemented real-time chat with Socket.IO, reducing latency by 80%.
- Designed reusable components and achieved 90% test coverage using Jest.

Education

CVR College of Engineering 2019 – 2023
B.Tech in Electrical Engineering (CGPA: 8.35) *Hyderabad, Telangana*
Narayana Junior College 2017 – 2019

Software Developer

Software Developer with hands-on experience building production-ready web applications, specializing in React-based SPAs, REST API integration using Node.js and Python, and secure, scalable backend systems, including ticketing platforms and workflow-driven applications.

Experience

SDE | Grassroots July 2025 – Present

- Developed and maintained **React-based** single-page applications using functional components and Hooks for complex user workflows.
- Handled shared and component-level state using a lightweight state management approach, ensuring consistent data flow across screens.
- Built responsive and reusable UI components using **CSS**, **Flexbox**, and **Grid**, ensuring compatibility across devices and browsers.
- Integrated frontend features with **REST API**s built using **Node.js** and **PHP,** working closely with MongoDB and MySQL-backed systems.
- Improved application stability and security by refining authentication flows with **OAuth2** and **JWT**, while collaborating via **Git** in sprint-based development.

SDE | GoCodeDesigners December 2024 – May 2025

- Developed and optimized **REST API**s using **Node.js**, improving response times by 20% through efficient database queries.
- Worked with **MongoDB** and **MySQL** to ensure reliable API behavior for React-based frontend screens.
- Contributed to **CI/CD** workflows using Git-based version control for consistent deployments.
- Created documentation and test cases to support system stability and frontend-backend integration.

Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design (Flexbox, Grid),Zustand
Backend: Node.js, Express.js, PHP, Python (Automation, IMAP), REST APIs, OAuth2, JWT
Databases & Caching: MongoDB, MySQL, MySQL Workbench, Redis
Tools: Git, GitHub, Vite / Webpack, GitHub Actions, Docker, Postman
Cloud: AWS (EC2, S3, IAM)

Projects

Ticketing Application | React, Node.js, MongoDB, Redis

- Developed a full-stack ticketing system using **React** with functional components and Hooks for ticket dashboards and workflows.
- Implemented state handling for ticket status, roles, and forms using zustand.
- Integrated **REST APIs** built with **Node.js** and **Express**, using **MongoDB** and **MySQL** for ticket and user data management.
- Implemented **OAuth2**-based authentication with **JWT** access and refresh tokens, managed via Redis for secure session handling.
- Built Python automation to fetch emails via **IMAP**, auto-create tickets, and support sentiment-based ticket classification.

Soul Sync | Dating Platform

- Built a responsive dating application using React, HTML, CSS, and JavaScript.
- Implemented real-time chat with Socket.IO, reducing latency by 80%.
- Designed reusable components and achieved 90% test coverage using Jest.
